

Dear Sir/Madam,

Zorginstituut Nederland invites you to respond to our request for pipeline information to use in our Medicinal Products Horizon Scan.

## 1 Introduction

Zorginstituut Nederland (ZINL) the Medicinal Products Horizon Scan twice a year. This is an overview, as complete and objective as possible, of all new medicinal products and line extensions that are expected on the Dutch market over the next two years.

## 2 Why provide data?

The Horizon Scan serves various purposes for a broad range of stakeholders in health care. Hospitals, for instance, can improve how they organise their purchasing, patients' organisations can inform their members and health care insurers and care providers can make agreements about the reimbursement of medicinal products and appropriate use. This improves access to new medicinal products. By providing data, you are contributing to the accuracy and completeness of the information in the Horizon Scan. Additionally, ZINL collects data for the Horizon Scan from various sources, such as registration authorities and clinical trials.

## 3 How can you participate?

As of 15 June, the website [www.horizonscangeneesmiddelen.nl](http://www.horizonscangeneesmiddelen.nl) will provide a link to a form with questions about various types of information. Where necessary, an explanation is provided of what is meant by certain criteria. A new column can be filled out per combination of medicinal product and indication. Information about brand name medicinal products and biosimilars/generics is also welcomed. Furthermore, information can also be provided on line extensions of medicinal products.

A new Horizon Scan is published every six months. With every new Scan you will be given a new opportunity to provide information.

## 4 What happens to the information you supply?

The input is presented to 1 of 7 expert working groups, along with the input collected by ZINL. The experts in the working groups discuss the input and eventually decide whether or not to include the information, or part of it, in the Horizon Scan. All information that is supplied by the manufacturer is regarded as public information. This is explained in more detail in article 3 of the enclosed 'explanation of the working method for manufacturers when supplying information for the Horizon Scan'.

## 5 When can you expect to see your information in the Horizon Scan?

If your information is included as input, it will appear in the Horizon Scan that is planned for December 2020. Reaction term Information can be sent to ZINL up until the 3rd of August 2020 at the latest. You can send the completed form by e-mail to [horizonscan@zinl.nl](mailto:horizonscan@zinl.nl).
